BLU

PROFILE

Mohamed Azzam combines a technical engineering foundation with international project, proposal, commercial and digital-marketing experience. His career spans engineering consultancy, infrastructure programmes, international B2B trading, technical sales operations and digital campaign delivery.

The professional positioning in this portfolio is intentionally broad but coherent: technical credibility + structured delivery + commercial growth + data-driven marketing.

Current focus: digital sales & marketing, business development, account management, proposal management and commercial strategy — while retaining a strong technical and project-delivery foundation.

CAREER ARC

**ENGINEERING
PROJECTS
COMMERCIAL
DIGITAL
GROWTH**

A career built across disciplines

From civil and water infrastructure to international commercial growth and digital marketing.

Timeline dates and roles are based on the professional materials provided.

Four connected capability pillars

Skills grouped by the way they are applied in real work.

ENGINEERING & WATER

- Water supply & sewer networks
- Infrastructure design
- Pumping stations & pipework
- Water-demand analysis
- AutoCAD / Civil 3D / WaterGEMS
- ArcGIS / FEFLOW / SewerCAD

PROJECT & PROPOSALS

- Project coordination & controls
- Tender / bid management
- RFP compliance
- Stakeholder coordination
- Risk, schedule & cost awareness
- Agile / Scrum / Kanban

COMMERCIAL & SALES

- B2B / B2C business development
- Account & client management
- Contract negotiation
- International market expansion
- Partnership development
- Revenue & cost optimisation

DIGITAL & ANALYTICS

- Digital campaign management
- A/B testing & conversion
- CRM / marketing automation
- Google Ads / Meta Ads
- Power BI / KPI analysis
- Salesforce / HubSpot

Concentrix — Digital campaign delivery

Senior Sales & Marketing Advisor | 2022–Present | Germany

+18%

lead conversion YoY

–12%

acquisition cost

+22%

marketing ROI in 9 months

€150M+

client portfolio support

30+

concurrent projects

€250K–€1.5M

project budgets

WHAT I DO

- Coordinate digital marketing campaigns across five international markets within an 8-person cross-functional EMEA team.
- Use Salesforce Marketing Cloud, HubSpot and Google Ads for campaign execution, CRM activity, audience management and optimisation.
- Translate campaign and market-performance data into recommendations, priorities and measurable commercial actions.
- Manage timelines, priorities, stakeholders and delivery quality across a pipeline of 30+ concurrent projects.

COMMERCIAL MINDSET

Performance is treated as a system: objective → test → measure → learn → optimise.

Commercial growth backed by technical depth

Selected experience from BETA BLU and Bildau & Bussmann.

BETA BLU INTL.

Business Development & Sales Manager | 2019-2021

12 → 45

client accounts

7

countries

\$250K-\$1M

average contract range

BILDAU & BUSSMANN

Technical Calculation & Order Processing | 2022

- 120+ quotes/orders per month
- 99% accuracy
- 40+ English-speaking clients across Canada & the US
- Projects up to €500K per order
- 10% reduction in rework/material waste within six months

TRANSFERABLE VALUE

total sales contribution

Commercial growth: market entry, negotiation, partnerships and account development.

Technical sales: translating customer requirements into specifications, quotations, drawings and production-ready information.

Qatar North — Local Roads & Drainage

Infrastructure delivery | Qatar | Proposal / project-support role

\$3.6B

programme value

39

projects / packages

20

engineers / SMEs in bid teams

15%

faster bid turnaround

ROLE & CONTRIBUTION

- Supported project controls and documentation from design through construction.
- Coordinated multidisciplinary proposal inputs and assembled cross-functional bid teams of up to 20 engineers and subject-matter experts.
- Produced proposal documentation and marketing collateral contributing to \$1.2B+ in awarded contracts between 2013-2016.
- Produced proposals for new markets in Africa and Asia, expanding bidding scope to 10+ additional countries.
- Coordinated with governmental authorities and client representatives.

PROJECT LESSON

Large infrastructure programmes demand the same disciplines as high-performing commercial teams: clear ownership, structured information flow, stakeholder alignment, deadlines, risk awareness and measurable outcomes.

Qatar Rail — Metro railway system

Infrastructure engineering | Wet utilities | Stakeholder/interface coordination

SCOPE

Detailed wet-utilities design and stakeholder/interface coordination for infrastructure associated with 30 metro stations and structures.

DELIVERY ELEMENTS

- Utility data collection and surveys
- Concept and detailed design
- Authority approvals
- BOQs and specifications
- Construction-method inputs
- Traffic-management coordination

WHY IT MATTERS

This project illustrates the technical side of Mohamed's profile: taking complex infrastructure interfaces, turning them into structured engineering deliverables, and coordinating requirements across disciplines and stakeholders.

CORE ENGINEERING TOOLSET

AutoCAD

Civil 3D

WaterGEMS

SewerCAD

ArcGIS

FEFLOW

Additional infrastructure experience

Selected project names and scopes documented in the professional record.

Al-Shamal City, Qatar

Roads & infrastructure development

Al Khor Commercial Street, Qatar

Road & infrastructure

27 ha • Public Works Authority (Ashghal)

Kabaan Village, Qatar

Roads & infrastructure development

160 ha • Public Works Authority (Ashghal)

Nasrania Village, Qatar

Roads & infrastructure development

100 ha • Public Works Authority (Ashghal)

Rafha, Saudi Arabia

Roads & infrastructure development

Ministry of Water & Electricity

Water Engineering Research

Red Sea Governorate, Egypt

2030 horizon • TU Berlin Master's thesis

INFRASTRUCTURE DESIGN SCOPE

The engineering portfolio includes water supply, irrigation, sewer networks, pumping stations, pipework and earthworks, supported by design software and structured project documentation.

Sustainable Financing of Water Supply

Case study: the Red Sea Governorate for 2030 vision | M.Sc. Water Engineering | TU Berlin

THE QUESTION

How can water-supply capacity, infrastructure investment and financing be planned together to support expected development through 2030?

METHOD

- Project population and water demand to 2030 using demographic and activity-based assumptions.
- Assess domestic, agricultural and tourism-related demand.
- Develop water-supply network cost models and compare technical/cost alternatives.
- Evaluate desalination investment requirements and lifecycle costs.
- Analyse financing sources, water pricing, tariffs and cost-recovery pathways.
- Translate the analysis into an investment decision-support perspective.

RESEARCH ARCHITECTURE

Demand

Network

Desalination

Cost

Financing

Decision support

The thesis explicitly structures these elements across its methods, results and financing chapters.

From technical model to investment case

Selected results reproduced from the original thesis; figures retain the thesis' historical 2018/2030 assumptions.

564,625

projected 2030 population

150,000 m³/d

total 2030 water demand

€355.9M

model-2 total required cost

Table 7 - Population and water demand in the main cities

City	Population 2018 (Capita)	Water demand m ³ /d	Population 2030 (Capita)	Water demand m ³ /d
Ras Ghareb	40585	9740	62440	150,000
Hurghada	204371	49050	314422	75,000
Safage	45624	10950	70192	17,000
Quesir	45647	10960	70227	17,000
Marsa Alam	8640	2070	13203	3200
Shelaten	21590	5190	33216	8000

The total current demand is 90,000 m³/d for current population 366457 capita and the expected demand in 2030 is 135,000 m³/d.¹⁶

4.2.2 Industrial water

The Red Sea governorate has not many industrial sectors due to the low population and the poor transportation network.

It is recommended to use treated water or desalinated water for industrial activities, so the industrial water is not considered in the study.

4.2.3 Agricultural water

As the Red Sea governorate is considered an arid area, so the agriculture is not common but for desert crops like dates which calculated as 59000 feddans and the total agricultural water demand is 0.002 BMC per year.

¹⁶ Mapower Directorate, Red Sea Governorate, December 2008

Population & demand table

Population & demand source figure

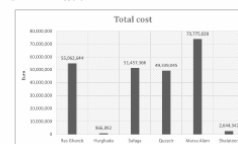

Figure 14 - Total cost for the network construction, desalination plant and O&M

Cost breakdown

Cost / investment source figure

These visuals are reproduced from the original thesis materials supplied for this portfolio.

Financing as part of infrastructure design

The thesis links technical requirements to affordability, funding sources and cost recovery.

FINANCING GAP

The study examines tariffs, taxes/subsidies and transfers as mechanisms to bridge the investment and operating requirements of water infrastructure.

COST-RECOVERY VIEW

The thesis evaluates O&M; coverage and total-cost coverage under alternative models, connecting technical investment to tariff scenarios.

SELECTED HISTORICAL OUTPUTS

- The thesis estimates a current demand of roughly 102,700 m³/day and a 2030 demand of about 150,000 m³/day under its stated assumptions.
- It identifies an increase of around 50,000 m³/day between the current and 2030 demand scenarios.
- Model 1 reports total construction and O&M requirements of €233.1M; Model 2 reports €355.9M under its network-cost methodology.
- The financing chapter analyses affordability, tariffs, subsidies, ODA/transfers and pathways toward O&M and total-cost coverage.

WHY THIS PROJECT BELONGS IN A COMMERCIAL PORTFOLIO

It demonstrates the ability to connect technical systems, quantitative modelling, investment requirements and financial decision-making — a useful bridge between engineering and business.

Education, leadership & continuous learning

Selected credentials from the professional record and certificates provided.

EDUCATION

M.Sc. Water Engineering — Technische Universität Berlin

2019 • Thesis: Sustainable Financing of Water Supply in Egypt

B.Sc. Civil & Structural Engineering — Tanta University

2010 • WILO Programme Scholarship 2018 • SFSD Programme Scholarship 2016

GOOGLE PROJECT MANAGEMENT

Completed 6-course Professional Certificate: Foundations, Initiation, Planning, Execution, Agile Project Management and Capstone.

FOUNDATIONAL LEADERSHIP

Concentrix B2B Sales — Foundational Leadership Program (FLP). Certificate of Achievement for participation.

Selected certificates shown from documents provided.

Tools, languages & professional trust
